PN 63-250, DN 65, PN 320-630, DN 10-50, T<sub>MAX</sub>: 600 °C

HIGH-PRESSURE LIFT CHECK VALVE Z15.3

## APPLICATION

- water, steam, non-aggressive substances

## CONNECTION

- weld ends, flanged

## OPERATION

- self-acting control

## DESCRIPTION

- straight – way pattern
- sealing surfaces are welded by hard steel or stellite
- complies with the requirements of the directive 2014/68/EU
- testing is carried out according to EN 12266-1 or on request

## BASIC DESIGN OPTIONS

- free from oil and grease
- other testing on request
- delivery on request according to TRD 201
- with spring

## VALVE INSTALLATION

Recommended valve assembly - horizontal position. In the case of mounting in a position other than horizontal, a spring must be included in the valve. Medium must flow under the cone in accordance with the direction indicated on the valve body.

It is necessary to consider the following points during assembly and operation:

- operating conditions must comply with operating parameters of the valve
- proper function of the valve is affected by the presence of impurities in the pipeline and flowing medium, therefore it is necessary keep working environment a pipeline clean, for example with using filters
- the medium used must be comply with the corrosion resistance of the valve material
- use of mechanically damaged valves during the operation is prohibited

**The service life of valves significantly extends regular maintenance and minor repairs carried out by trained personnel.**
